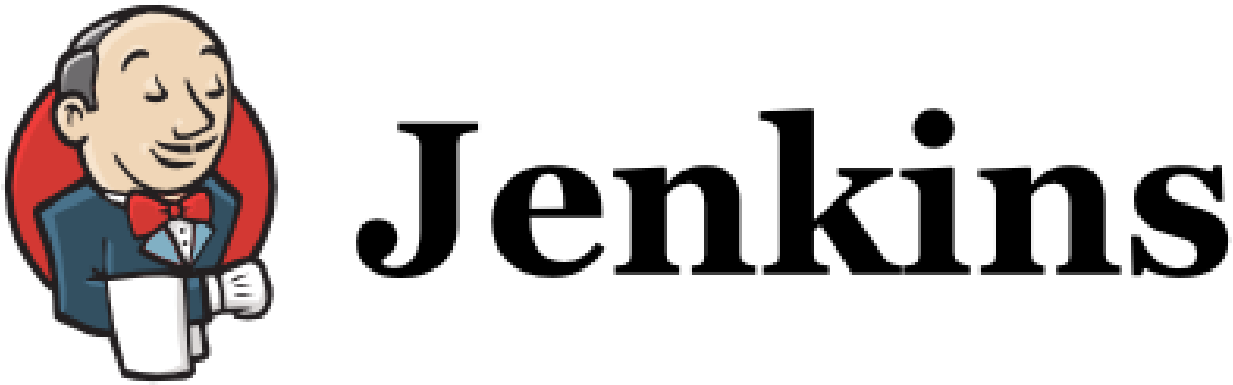
Flemmard Documentation

Release 1.0

Mozilla Services

July 26, 2012

CONTENTS



Flemmard is a script you can use to drive Jenkins from the command line.

The script let you:

- build jobs with specific tags
- download artifacts
- create new jobs using a job template
- list jobs and their status

CHAPTER

ONE

INSTALLATION

Make sur you have pip installed, then

```
$ pip install flemmard
```

CHAPTER

TWO

USAGE

Flemmard provides a command-line script called ... **flemmard** that comes with actions:

- **list** – Lists all jobs.
- **status** – Gives a job status
- **build** – Build a job.
- **create** – Create a new Job
- **artifacts** – Lists the artifacts.

For every action, you can specify the Jenkins root URL with *–url*, or add a *.flemmardrc* file into your home directory to set up a default value:

```
[flemmard]
url = http://jenkins.example.com
```

Using *–url* explicitely will override any value found in *.flemmardrc*.
